**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of Invention I – Claims 1-4 in the reply filed on 11/10/06 is acknowledged.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (US 6624871), in view of Morozumi (US 4862237).

Kim discloses the limitations of:

Claim 1. A thin film transistor array panel comprising: a gate wire formed on the substrate and including a gate line (31L, fig. 4A) and a gate electrode (31G, fig. 4A) connected to the gate line; a gate insulating layer (32, fig. 4A) formed on the gate line; a semiconductor layer (33, fig. 4A) formed on the gate insulating layer; a data wire formed on the semiconductor layer and including a data line (35L, fig. 4A) intersecting the gate line, a source electrode (35S, fig. 4A) connected to the data line, and a drain electrode (35D, fig. 4A) located opposite the source electrode with respect to the gate electrode; a pixel electrode (37, fig. 4A) connected to the drain electrode; and an etching assistant pattern (39, fig. 4A) located out of an area (out of the area due to the pattern does not

cover the gate line) defined by intersections of the gate line and the data line (col. 4, Ins. 58).

Claim 2. The thin film transistor array panel of claim 1, wherein the data wire comprises a lower film of Cr, Mo or Mo ally and an upper film of Al or Al ally (col. 4, Ins. 28-31).

Claim 3. The thin film transistor array panel of claim 2, further comprising a passivation layer (36, fig. 4A) disposed between the data wire and the pixel electrode.

Claim 4. The thin film transistor array panel of claim 3, wherein the semiconductor layer has substantially the same planar shape as the data wire except for a channel portion located between the data line and the drain electrode.

4. Kim, as indicated above, discloses all the features of the claims except:

Claim 1: an insulating substrate.

a. However, Morozumi discloses:

an insulating substrate (col. 6, ln. 66 – col. 7, ln. 4).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the substrate in Kim, with the insulating substrate as taught by Morozumi, because blooming and smear can be avoided.
